APPENDIX: COMPUTER SOFTWARE (PROGRAM LISTINGS)	41

## LIST OF FIGURES

FIGURE		PAGE
1	LOBD for binary symmetric purely coherent signals.	5
2	Comparison of the optimum nonlinearity for Class B noise with the hard-limiter.	11
3	Comparison of the optimum nonlinearity for Class A noise with the hard-limiter.	12
4	Comparison of the Middleton model for $\alpha = 1$ and $A_\alpha = 1$ and $10^{-3}$ with the Hall model $\theta = 2$ .	15
5	Calculated and simulation results for the hard-limiter and LOBD nonlinearities for $N = 100$ .	20
6	Calculated and simulation results for the hard limiter and LOBD nonlinearities for $N = 10$ .	21
7	Signal phasors plus noise phasor for CPSK.	23
8	Receiver structures.	25
9	Simulation results with Gaussian noise for Rayleigh fading and constant signal for binary CPSK.	27
10	Simulation results with Hall noise, $\theta = 2$ , and constant signal.	28
11	Simulation results for constant and Rayleigh fading signal, Hall noise, $\theta = 2$ and $N = 10$ .	30
12	Simulation results for Gaussian noise into the LOBD, Hall $\theta = 2$ , nonlinearity.	31
13	The Hall model APD for $\theta = 4$ . The APD is normalized to the rms envelope level.	33
14	Simulation results for Hall noise $\theta = 4$ , and a linear receiver for both constant and Rayleigh fading signal.	34
15	Simulation results for Hall noise, $\theta = 4$ , for a linear receiver and for the LOBD and bandpass limiter nonlinearities.	36
16	Simulation results for constant and Rayleigh fading signal, Hall noise, $\theta = 4$ , $N = 10$ .	37
